

Dementia Detect - Clinical Assessment Report

Patient ID:	11B0A4DC	Scan Date:	2026-05-11 22:54:12
Modality:	MRI (Axial)	Analysis Version:	v1.0 (EfficientNet-B4)

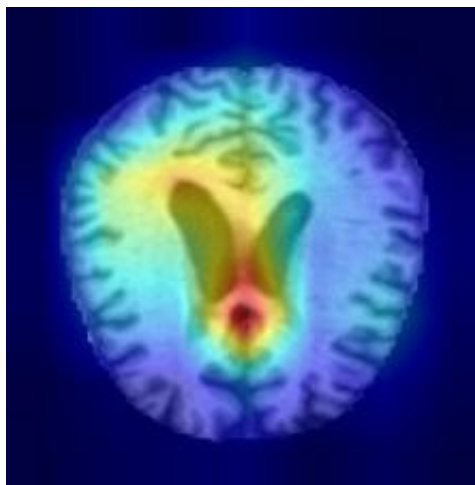

Primary Diagnosis

The AI model indicates a primary diagnosis of **ModerateDemented** with a confidence score of **100.0%**.

Visual Findings (GradCAM ROI)

Original Input

GradCAM Activation

Findings Summary

Automated volumetric and heatmap analysis highlights localized atrophy and signal intensity variations consistent with the predicted stage. The heatmap overlay indicates the neural network's primary areas of focus, which typically correlate with the hippocampus and entorhinal cortex in positive cases. *Clinical correlation is required.*
